

**locking. recording. tracking.**

**fmtec.eu**

FM Tec – Future Management Technologies – stands for the vision to change the world of security systems significantly. We develop and manufacture intelligent systems for protection, monitoring and localization of valuable goods during transport and storage. Thanks to our international orientation we offer varied and exciting fields of activity. If you also want to develop unique solutions and become a part of an innovative team, then you are the right person for us!

**Wanted:**

**Hardware/Firmware Developer m/f/d**

**Your challenges:**

- Developments in Security Technology, GPS tracking, IoT
- Production of electronic assemblies (eCAD, Low Energy)
- Firmware development (C, Assembler analysis)
- Development and commissioning of prototypes
- Performance of circuit simulations
- Elaboration of specification sheets

**Expected characteristics:**

- Passion for electronics
- Inventiveness
- Independent and reliable functioning
- Team-minded

**What we offer:**

- Versatile and exciting tasks
- Hardware development from concept to its deployment
- The chance to shape the future with your ideas
- Cooperative, innovative team
- New opportunities in a growing company
- Work-life balance
- Permanent contract

The salary of this position is based on your professional qualifications and your work experience.

**Please send your meaningful application documents to:**
