

TRANSPORT SECURITY FOR RETAIL CHAINS

Innovative locking systems for the secure transportation of goods.

SECOLO - locking system for transportation in retail chains.

Reducing the loss of goods and optimising handling of valuable goods.

With SECOLO container locking systems, innovative technology guarantees the protection of transported goods, simple and secure handling for employees as well as the documentation of all processes along the distribution chain.

Installations for many satisfied customers in Europe and Asia are the best reference for how straightforward the SECOLO system is in regards to installation, handling and service.

TRANSPORT SECURITY FOR RETAIL CHAINS

Innovative locking systems for the secure transportation of goods.

Sophisticated security solutions for retail chains

SECOLO's electronic container locking systems help to reduce the loss of goods in the distribution chain and provide effective protection from theft or the damage of goods. The unlocking of the tamper-proof locking technology takes place without a mechanical key and therefore guarantees simple and secure handling for employees. Access rights can be granted flexibly and sent electronically to those entitled to them. This prevents all the circumstances

that would arise from the separate transportation of mechanical keys. RFID tracking ensures the complete documentation of all movements and unlocking incidences, facilitates the tracking of containers and gives plenty of warning against a potential misrouting of goods. If containers containing goods are dispatched from a shop, the system automatically requests new empty containers of the same type.

The advantages for retail chains

- No opening of containers at locations where they have not been allocated to
- Significant reduction in the loss of goods in the distribution chain
- Containers can be used in store as temporary secure storage
- The lack of mechanical keys or seals provides reliable theft protection
- Practical and secure handling prevents operational errors
- Simple and cost-efficient replacement of lost RFID cards or RFID chip tags
- Extensive range of containers, or alternatively, individually manufactured models
- Transparency and clarity through the thorough recording of all operations
- Flexible integration into logistical processes and optimisation of these processes

SECOLO software modules

SECOLO's modular design enables the system's targeted adaptation to individual requirements. The SECOLO container locking system is suited to every security level and plant size thanks to its constant scalability.

SECOLO Management Center

- Container and locking authorisation management
- Web interface for the shipping of security containers to subsidiaries
- Quick location of misrouted containers
- Automated reordering of empty containers for subsidiaries
- Automatic unlocking in specific areas
- Information about which container is located where
- Interfaces for each additional software are programmable (SQL database)

SECOLO for all container products and container sizes.
We are happy to assist you further.
