Application examples

Protection of valuable consumer goods

> No unlocking of containers at unassigned locations
> Avoidance of theft in the logistic chain
> Container can be used in the store as a temporary security cabinet
> Reliable theft protection without mechanical keys or mechanical seals - electronically monitored

Transportation of jewelry and precious metals

> Protection against theft during transport
> Customer- or employeespecific access rights increase the protection level
> Separate transmission of the unlocking PIN-code per shipment
> Logging of all events like identifications, unlockings, alarms, etc.
> Location based unlocking for high security

Transport of hazardous goods

> Access permission only for persons with appropriate qualifications
> Opening of containers only at at predefined locations
> Additional environmental conditions for unlocking
> Electronic log of all actions with the containers

Transport of internal letters and documents

> Exclusive access for sender and recipient (supports the EU-DSGVO)
> Easy assignment of access rights via management software
> Documentation of every single access
> Security containers in different sizes

Secure transport of laboratory samples and forensic material

> Protection against integrity violation
> Locking of all access rights during the transport
> Time stamp on arrival of the security container at the laboratory
> Alarm in case of transport timeout

Cargo Bike

> Authorization assignment via lock keypad or PC software
> Reliable protection of the transported goods without key
> Fast and convenient unlocking via RFID-Card
> Automatic self-locking when closing the lid
> Robust lock design for harsh operating environment

Intralogistics - protection and digitalization

> Regulated access to materials, if necessary 4-eyes principle
> Container presence monitoring with alarm
> Monitoring of lid open times with local acoustic alarm and message to the control center
> Location Based unlocking limited to 1m^2 within a building

Protection of expensive tools

> The management software shows any time who has which tools
> Takeaway of toolboxes only by authorized persons
> Alarm when lid is not closed in time
> Mechanical security by steel cable anchor in the warehouse and on the construction site

Mobile safe for keys, documents, etc.

> Security container with double steel cable for fixation in the vehicle
> Access to content in the container only by authorized persons
> Recording of all events like identification, unlockings and alarms
> Container programming directly on the lock or via PC software

Your application is not included?

We gladly accept the challenge. Tell us your requirements and we will work out a solution that will bring you more security and more efficiency.

GPS For this application a GPS tracker can also be used.
