

SECOLO SAFE-P

SECOLO Smart Locks protect your goods in transit

SECOLO SAFE-P

Transporting valuables safely in vehicles.

In a world in which mobility and the transportation of goods and valuables play a central role, security is of the utmost importance. Protecting against theft and unauthorized access to sensitive goods is a challenge that companies and private individuals alike must face. This is where the SECOLO security lock comes into play, which can be installed in any type of container to ensure secure and flexible storage during transportation in vehicles.

The SECOLO system is the ideal solution for individual vehicles or vehicle fleets due to its incredible scalability. The SECOLO Smart Lock allows access rights to be activated directly on the lock, eliminating the need for software. For fleets of cargo bikes, the SECOLO Management Software is used, with which all parameters and access rights can be set quickly and conveniently directly from the PC workstation. If required, a GPS tracker can also be attached so that the current position is visible and the tours are documented.

STAY INFORMED
with our Newsletter.

SECOLO SAFE-P The fleet solution managed via the SECOLO software.

- Simple management of access rights via the intuitive SECOLO software.
- Time-limited rights can be assigned in our software.
- The SECOLO Smart Lock locks automatically as soon as the lid is closed.
- If the lid is not closed in time, an alarm is triggered.
- The system documents who unlocked or opened containers and when.
- GPS and/or RFID tracking make it possible to log routes.
- Depending on the technology used, employee ID cards can be used for unlocking.
- Markers can be used to define local areas (up to 1m² in size) where the container can be unlocked. If the vehicle leaves this area, all cards and codes are blocked.

SECOLO advantages

High level of investment security

When switching from stand-alone to the professional (networked) version, the existing existing hardware can continue to be used.

Excellent anti-theft protection

High break-open strength (4000 N / approx. 400 kg)

Robust & durable

The SECOLO Smart Lock is shock-resistant, easy to integrate and integrated and offers patented locking technology.

Always well informed

Complete documentation of all events (unlocking, alarm, etc.)

Free choice of identification method

Identification via pin code and / or RFID chip (card, key fob, wristband)

Efficient & convenient

- Automatic locking of the lid
- Management of all safes in the SECOLO system
- Simple deletion or replacement of lost RFID chips
- Wireless data update
- Thanks to the use of RFID technology, the lock is insensitive to weather conditions.
- A lockable trolley is available for heavy goods.

For this application, a GPS tracker can also be used.
